Are you considering re-roofing your home with concrete tile? Your building department will require a stamped letter from a structural engineer confirming that the roof framing of your home will support the additional weight of this durable, yet heavy product.

You will need this report to get a permit. So, the first step is to give us a call! We'll set up the inspection and within 2 weeks, the data will be analyzed and we'll have 4 stamped copies of your report mailed to you or your roofer (whichever you prefer).

Mark Benjamin is the structural engineer and owner of Crown Jade Design and Engineering, Inc. Mark has provided engineered roof reports for the last 6 years, after a lifetime of construction experience. This combination of experience allows him to provide you and your roofer with a concise report that suits the needs of your home.

If you have any questions or if you need an inspection, contact us by phone or email, anytime! If you'd like to find out more about Crown Jade Design and Engineering, Inc., visit our website at [www.crownjade.com](http://www.crownjade.com)
